教科書 原文

- Good morning. Yesterday you introduced us to some examples of Australian prehistoric paintings. We were very impressed.
- Some of the paintings reminded us of Japan's prehistoric artifacts. The photo on the left is an example of dogu (cf. photo 1). They are earthen figures created in the Jomon period (c. 11,000 B.C.—c. 500 B.C.). The Australian cave painting on the right is probably older (cf. photo 2). There is something strange and mysterious about both these prehistoric artifacts. You can't take your eyes away.
- In a moment, we'll tell you more about Japan's mysterious little dogu. But first, we'd like to share with you what we've learned about life in the Jomon period. Incidentally, the Jomon period gets its name from the “rope patterns” that appear in its pottery (cf. photo 3).
- People have found Jomon artifacts all over Japan. Misaki, our next speaker, will tell you about what was discovered at one of the most important sites: Sannai-Maruyama.

生徒作品④

- Good morning. Yesterday you introduced us to some examples of Australian prehistoric paintings. We were very impressed.
- Some of the paintings reminded us of Japan's prehistoric artifacts. Do you know dogu? The photo on the left is an example of dogu (cf. photo 1). It is similar to E.T. They are earthen figures created in the Jomon period (c. 11,000 B.C. — c. 500 B.C.).
~~Making dogu is harder than building a house.~~ The Australian cave painting on the right is probably older (cf. photo 2). There is something strange and mysterious about both these prehistoric artifacts. You can't take your eyes away.
- In a moment, we'll tell you more about Japan's mysterious little dogu. But first, we'd like to share with you what we've learned about life in the Jomon period. Incidentally, the Jomon period gets its name from the "rope patterns" that appear in its pottery (cf. photo 3).
